Khosrow (Mahdi) Yusefi

Distributed Systems Engineer · JVM Backend · Platform Reliability

Summary

Distributed systems engineer with **12 years** of backend experience, most of it on Nazdika, a social and dating platform with **180K daily active users.** Led its architecture from a stateful monolith to Kubernetes and an event-sourced CQRS gateway serving **4,000+ req/s at under 30 ms** while cutting infrastructure cost by **20%.** Built recommendation and matching systems that **doubled daily watch time** and lifted chat engagement by **30%,** designed a greenfield real-time messaging platform, and now work on deployment safety and automated quality across the fleet.

> See architecture diagrams and results for each system at mahdiyusefi.github.io/MyResume

Skills

Languages	Java, Kotlin, Go, Spring Boot, Python, TypeScript, Ktor, Hibernate, Jersey
Distributed systems	Microservices, Event Sourcing, CQRS, Kafka, gRPC, Protocol Buffers, NATS
Data	PostgreSQL, Redis, Elasticsearch, Cassandra, ScyllaDB, MongoDB
Infrastructure	Kubernetes, Docker, GitLab CI/CD, Argo CD, Istio, Nginx, Harbor, Vault, Prometheus
Practices	Domain-driven design, test-driven development, platform migrations, E2E and acceptance testing
Mobile and SDKs	Android in Kotlin (MVVM + MVI), React Native with Expo, client SDK design
LLM integration	OpenAI and Gemini APIs, live provider switching, schema-validated output (Zod), Firebase Cloud Functions

Experience

Senior Software Engineer, Platform Reliability

Jan 2026 – Present

Oddrun / Nazdika · Tehran

- Designed **Control Tower**, a deployment-safety service that correlates GitLab pipelines, Fleet configuration and Argo CD syncs with Kubernetes runtime state, showing who requested a change, what actually ran, and what happened next.
- Defined post-deployment regression watch: compares errors, latency, restarts, OOMs and node pressure against a baseline, reports correlation as evidence with explicit uncertainty, and routes **audited rollback** through the existing GitLab and Fleet approval workflow.
- Built a **Go E2E coordinator** that runs two-emulator Android messaging tests in GitLab CI against the integration backend over MQTT, covering **7 scenarios** including offline recovery, network transitions, background and group delivery, with JUnit and HTML reports and device evidence.
- Built **TestEnterprise** (Spring Boot 4), an acceptance-testing service for the Nearby people feature that classifies every result by distance and activity using Iran province and county boundaries; streams progress over SSE, archives reports in PostgreSQL, and is secured with JWT and a run lock.
- Built **Acceptly**, an Expo web panel for operator-run acceptance tests, with revision-based live tables and configuration supplied by Vault at runtime on Kubernetes.

Stack: Go · Java · Spring Boot · TypeScript · Expo · GitLab CI · Argo CD · Kubernetes · Prometheus · Vault · PostgreSQL

Software Engineer

Oct 2024 – Jan 2026

Oddrun · Tehran · stepped back from team lead to own a new product hands-on

- Owned the full system design of a **greenfield real-time message delivery platform**: data model, ScyllaDB and Redis storage topology, service boundaries and latency budget, from blank page to production.
- Designed the **public API and SDK contract** for Android and React SDKs, enabling third-party integration while keeping the core platform decoupled from client implementations.

Stack: Java · Kotlin · Go · TypeScript · ScyllaDB · Redis · Android SDK · React SDK

Software Team Lead
May 2022 – Oct 2024

Oddrun / Nazdika · Tehran · led 4 engineers, owned backend roadmap and architecture

- Drove the migration of the gateway from CRUD to **Event Sourcing and CQRS**, reaching **4,000+ req/s at under 30 ms** and cutting infrastructure cost by **20%**.
- Designed a multi-signal **recommendation engine** (Elasticsearch, PostgreSQL, Redis) where offline batches feed real-time ranking: **2× daily watch time**.
- Architected **geo and preference-aware matching** at platform scale: **+30% chat engagement**.
- Built a behavioural analytics pipeline tracking user actions across the product, feeding the recommendation layer and the customer success team.

Stack: Java · Kotlin · Python · Spring Boot · gRPC · PostgreSQL · Redis · Elasticsearch · Cassandra · NATS · Kubernetes

Senior Software Engineer
Mar 2021 – May 2022

Oddrun / Nazdika · Tehran

- Led the **containerisation and Kubernetes migration** of the whole platform, setting the deployment topology, service mesh configuration and rollout strategy.
- Designed an **event-driven replicated cache** that let a stateful monolith run horizontally across **6 Kubernetes instances** without a distributed session store.
- Delivered the dating recommendation microservice and a **bank gateway switcher** that widened payment provider coverage and grew revenue.

Stack: Java · Kotlin · Jersey · gRPC · Hibernate · PostgreSQL · Redis · Elasticsearch · MongoDB · NATS · Docker · Kubernetes · Istio

Software Engineer
May 2019 – Mar 2021

Oddrun / Nazdika · Tehran · one of 8 engineers, Agile Scrum

- Brought daily 5xx errors and failed purchases **under 3%** by diagnosing and fixing critical legacy bugs.
- Rewrote **6 Python REST microservices** in Java using TDD and DDD.
- Migrated message storage from PostgreSQL to **Elasticsearch with ILM**, improving query latency and retention management.

Software Engineer
Dec 2017 – May 2019

4Charkh · Tehran · auto-mechanics marketplace, 5-person team

- Built the spare-parts marketplace backend: accounting, product categorisation, orders and payment integration, plus a scheduler for service reminders and e-invoice and registration services.

Stack: Java · Spring MVC · Hibernate · Tomcat · PostgreSQL · Redis

Backend Developer
Oct 2014 – Dec 2017

Self-employed · Tehran · backend systems for Teen Dairy Co and Domino Ice Cream & Dairy Co

Independent projects · all in production and in use

Sales Manager · B2B sales and distribution platform
2026 · In production

- Spring Boot API for catalogue, pricing, VAT, discount policies, orders, invoices and distribution; one Expo app for web, iOS and Android with **7 role-based areas**; self-hosted with Docker, nginx and TLS behind Cloudflare. · Java · Spring Boot · PostgreSQL · Expo · Docker · nginx

Sales Control Tower · analytics for a food distributor
2026 · In production

- Read-only API over a live ERP database feeding **24 report pages** of KPIs, targets against actuals and alerts, scoped per seller and supervisor. · Spring Boot 4 · SQL Server · PostgreSQL · Expo

PackCRM · CRM for a packaging printer
2026 · In production

- **Six engines** on real order history: buying cycle, 9-level RFM segments, 7-factor call priority, cross-sell; 21 screens, 47 tested control rules, thresholds tunable without redeploy. · Spring Boot · PostgreSQL · React · TypeScript · Docker

Education

B.Sc. Computer Science, Sharif University of Technology, Tehran — 2012 – 2017
